Connected.

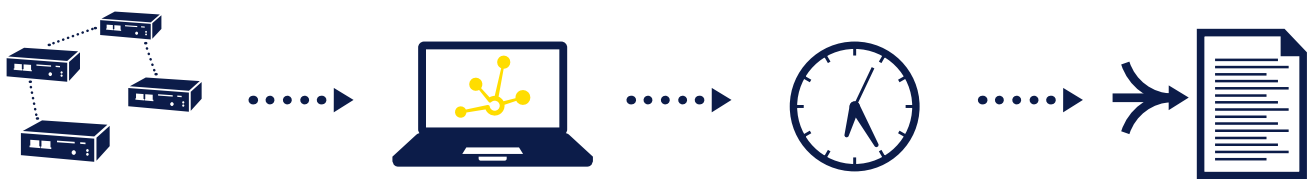

One virtual device.

Use Telemotive System Link to create a system perfectly tailored to your needs: Connect several blue PiraT Mini and one blue PiraT2 via Ethernet. Always new – flexible, simple, long-term reliable and future-proof.

Manage your logger network easily via Telemotive System Client. Even software updates for several loggers are possible – with just a few clicks.

Four easy steps.

Connect.

Simply connect your data loggers via Ethernet. Telemotive System Link supports all interfaces (e.g. MOST, Ethernet/BroadR-Reach, CAN, LIN, FlexRay) – now and in the future.

Configure.

Assemble your logger system on the PC exactly as you need it. Telemotive System Link makes configuration of the connected interfaces and data loggers easier than ever.

Synchronize.

Rely on the unique time synchronization between the connected data loggers. With a resolution of 1 μ s, it guarantees maximum recording precision.

Read out.

You get all data sets of the selected interfaces either in individual files or in one file. Everything at a glance, without the tedious collating of individual files.
